

Maritz Buchholz | Backend Engineer | Brooklyn, NY

Combining +10 years of Vice President-level financial systems authority with modern backend development

Portfolio: maritzbuchholz.netlify.app/ | GitHub: github.com/maritzbuchholz | LinkedIn: linkedin.com/in/maritzbuchholz

+1 646-406-4893 | maritzbuchholz@gmail.com

PROFILE

- **Backend & API Development:** Experienced in building RESTful APIs, relational database schemas (MySQL), and CI/CD deployment pipelines using Node.js, Express, and TypeScript
- **Domain Authority:** +10 years at Morgan Stanley managing institutional portfolio risk, cash/asset settlement workflows, and +\$1Bn syndicated loan executions
- **Quantitative Foundation:** Strong mathematical background (BS in Mathematics, Fordham) with specialized financial engineering coursework in C++

PROJECTS

[Instock](#) | Team built inventory management system

- JavaScript, Node.js, Express.js, React, MySQL, Netlify, Heroku
- Built a RESTful API that includes CRUD operations, routes, middleware, and a relational database
- Collaborated through estimating story points, assigning Jira tickets, and managing commits via individual branches

[LoveBug](#) | Team built wireframe of relationship app

- JavaScript, React, Netlify, Heroku, Antigravity
- Built a frontend for a relationship app, developed in collaboration with a design and data science team
- Extensively leveraged AI to build frontend React components to design specs while providing feedback on usability

[Metalnome](#) | A metronome for metalheads with mobile functionality

- JavaScript, Tone.js, Web Audio API, Netlify, Heroku, GitHub Actions
- Set up GitHub Actions to create a CI/CD workflow that allows testing on mobile devices without production deployment
- Built media player metadata using AI to allow web browser interaction on an iOS lock screen

WORK EXPERIENCE

Portfolio Manager & Trading Vice President | Morgan Stanley

Aug 2015 – Present, New York, NY

- Partnered with quantitative strategists and software engineering teams to specify, test, and deploy risk management tooling and data workflows for a multibillion-dollar loan and derivatives portfolio
- Managed financial data system integrations and settlement workflows for syndicated transactions exceeding \$1Bn in notional value, coordinating across legal, technology, and operations teams to ensure strict compliance
- Applied LLM-based tools to accelerate contract review, monitor news flow, and synthesize large data sets for decision-making
- Queried and analyzed large, multi-source data sets to deliver actionable insights on portfolio risk and business opportunities to senior leadership
- Trained, mentored, and developed interns and junior associates on technical workflows, data tools, and analytical processes

EDUCATION

BrainStation | Diploma, Software Engineering

Sep 2025 – March 2026, Remote

Fordham University | Bachelor of Science in Mathematics

Sep 2008 – May 2012, Bronx, NY

CERTIFICATIONS

Baruch Pre-MFE Probability Theory for Financial Applications with C++ – Jan 2020

Baruch Pre-MFE Advanced Calculus with Financial Engineering Applications with C++ – Jan 2020

SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, Python

Backend: Node.js, Express.js, RESTful APIs, MySQL

Frontend: React, JSX

DevOps & CI/CD: Git, GitHub, GitHub Actions, Netlify, Heroku

Tools & Platforms: Agile/Scrum, Jira, Vite, npm

AI Tools: Antigravity, Claude Code
